

After-DinnerIT - Geo-Power!

Monday, 13 July 2009

Andrew Ochse from HRP Geothermal Power talks about this method of generating power, why he thinks it will succeed in South Africa, and how it compares to other means of power generation.

Green IT is a term with which has entered the lexicon over the past years. Whether you agree with global warming or not, the drive to reduce carbon emissions has become part of everyone's strategy. And in South Africa, of course, we remain cognizant of last year's issues with Eskom; and power-hungry companies have to think about how to ensure a secure supply of electricity.

Geothermal energy is an alternative means of production that offers the potential of cleaner and cheaper power. Andrew Ochse came into the studio to explain to us what this is all about, and why he thinks it will become part of our future.
