

Pubcast Episode #5

Monday, 16 February 2009

Episode 5 of the IT Security Pubcast.

The Pubcast makes its way to the 5th February South African Information Security User Group Chapter Meeting in Johannesburg, and performs a live interview with Craig Rosewarne and Karel Rode on the history and objectives of the ISG.

The audience participates in lively debate on the objectives of ISG, as well as those of the Pubcast and DiscussIT, including criticism of the way in which banks keep customers informed regarding their own data, and the leakage (discussed in Pubcast Episode 3) of the Black Adler's identity.

Finally, the audience proposes additional services that they would want to see provided.
